## TIMBER PILE REPAIR SYSTEM

PILECAP, Inc. offers the strongest repair in the marine industry for timber pile. The PILECAP Timber Pile Repair System utilizes innovative technology to remove a portion of damaged or deteriorated wood piling and installs a new section of piling without adding additional weight or causing further stress to the pile. With PILECAP's patented Friction Coupler System, the piling can be repaired and reloaded back to 100% of the structure's original specifications and can be permanently fastened to existing sub-structure.

Regarding the new section of piling, this new timber section is environmentally friendly without residue or harmful chemicals, however, issues remain even with the pressure treated properties of the timber. The timber is treated and designed to withstand years of environmental and biological threats but is still subject to natural weathering and marine life growth. The new pressure treated timber used in conjunction with our PILECOAT System, gives the new timber 100% resiliency to environmental threats such as hydraulic pumping from current and waves, debris, and the growth of marine life.

If you have any further questions contact PILECAP Inc. at (913) 948-8340 or visit our website at [www.Pilecapinc.com](http://www.Pilecapinc.com).

\*The PILECOAT System has been tested to a 75+ year serviceability. US Patent No.5.813.800
